

Administrator Summits

Why should my staff use SLDS tools?

Using SLDS provides much more than just a CCRPI bonus, it also helps educators provide artifact evidence for TKES and LKES!

Student Profile Reports provide teachers up to nine years of data on their students.

As new assessment data is loaded into SLDS, teachers can easily create remediation and enrichment groups.

The student's profile provides teachers with data for parent conferences, SST meetings, and IEP meetings.

Teachers can access standards based resources under the "Resources" tab that have been vetted by other Georgia educators.

The "Gold Key" gives teachers quick access to the standards for their courses.

The IIS Data Analysis Tool allows users to create customized reports specific to their needs.

STAR data from Renaissance Learning can be imported into your SLDS Dashboard giving teachers access to their students' formative assessment results.

The High School Feedback feature is strategically limited to a few users within a school system to permit viewing and analysis of their graduated students' college performance.

Teachers can access a standards-aligned bank of test questions to create formative assessments tied to their students under the "GOFAR" tab.

The Gifted Eligibility Form allows users to enter and monitor the results of the assessments that are administered to students to determine Gifted eligibility.

Parents have access to their children's SLDS data directly through the school's Parent Portal (if this access is available through the district's Student Information System).

The Learning Object Repository (LOR) allows school systems the opportunity to store their system's digital resources in a secure location that is accessible to their district personnel.

**Summits will be held around the state (hosted by many of the RESAs).
Click the Register Here link to view the locations and to register.**

10:00AM-2:00PM
